

Prepare for 3rd Grade Math

This summer you need to work on memorizing your math facts. There are different ways you can practice these facts. You can use flash cards, play card games, use various computer programs and take practice tests. I will be getting all of our math tests from two different web sites, Math facts café and Superkids.com.

I know that each of you worked on these with Mrs. Filipko this past school year. In 3rd grade you will do a math fact test each day. You will begin with addition, then subtraction, on to multiplication and finally division. In 3rd grade you will have 2½ minutes to complete the daily test. If all of you successfully complete through times 12 we will celebrate with an ice cream party.

Have a wonderful summer. Use numbers as often as possible.
